

ABOUT US

Rescology is an environmental consultancy providing services to the resources sector, infrastructure and manufacturing sector.

We help businesses get environmental approvals through 30 years experience in Environmental and Social Governance.

We provide environmental management services to the resources, infrastructure and manufacturing sectors. Our long standing reputation comes from our ability to find solutions, engage stakeholders and fast track approvals.

We also work with the ownership team to provide support and guidance.

COMPANIES WE'VE WORKED WITH

EXPLORATION & LAND ACCESS

Rescology's experience in exploration projects and asset development includes gold, copper, mineral sands, base metals, salt, graphite, diamonds, and iron ore ranging from densely populated regions of Africa to remote and environmentally sensitive areas in Western Australia.

We support explorers with ESG management and leadership from as early as the acquisition phase, exploratory drilling and onto intensive drilling campaigns and delivery of mines to mining.

Our experience in developing strategy includes complex Land Access Management Plans for projects with multiple competing constraints such as cropping cycles, climate, Phytophthora dieback, consent from landowners, weed hygiene, Threatened and Rare flora, flowering periods, animal breeding periods, and underlying tenure.

EXPLORATION RELATED SERVICES
